**DETAILED ACTION**

Claims 15-56 are currently pending.

**Restriction Requirement**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 15-33, drawn to method for treating using G17 peptide or fragment thereof, classified in class 514, subclass 02.
- II. Claims 34-55, drawn to method for treating using antibodies, classified in class 424, subclass 130.1.
- III. Claim 56, drawn to a composition, classified in class 424, subclass 185.1.

The inventions are distinct, each from the other because of the following reasons:

Groups I-II are to methods of treatment which are patentably distinct because they utilize different agents – agent comprising G17 peptide, and agent comprising antibodies, respectively. The groups require non coextensive searches and have separate enablement requirements.

Inventions III and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different processes such as raising antibodies.

Inventions III and II are unrelated as method of group II utilizes a different product.

Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their recognized divergent subject matter, because the patent and/or sequence or structure search required for different groups is different, and/or their necessity for non-coextensive literature searches, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

If applicant elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn process claims which depend from or otherwise include all the limitations of the allowable product claim will be rejoined. (MPEP 821.04).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by

a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).

### **Species Requirement**

Election of species should be required prior to a search on the merits in all applications containing both species claims and generic or Markush claims.(MPEP 808.01(a))

If any of the Groups is elected, the following election of species is required:

The claims of Groups I-III are individually or dependently directed to a plurality of disclosed patentably distinct species of agent (see part (a) of claims 15 or 34, or 56) used in combination with G17 peptide, or with an antibody.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for an elected Group, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

To be complete, a response to the election of species requirement should include a proper election along with a listing of all claims readable thereon, including any claims subsequently added. MPEP 809.02(a).
